

ANALYST REPORT.... Mason Grigsby, IMERGE Consulting May 15, 2006

ABT GLOBAL, INC, "WEBXPRESS" REMOTE HOSTED DOCUMENT WAREHOUSE

Advanced Business Technologies, Inc. (ABT) is an established company in a marketplace being overwhelmed by announcements of new organizations attempting to enter the ASP - *Application Service Provider* - marketplace for electronic documents.

Founded in 1996, the ABT WebXpress hosted solution has incorporated the latest Internet technology to provide fast, secure global access to back office documents. Scanned document images, computer statements and reports, email, incoming faxes, and office objects are all electronically available in the WebXpress document warehouse.

WebXpress offers technology advancements that differentiate it within the Hosted Enterprise Content Management (ECM) marketplace. Key elements of the solution include:

CORPORATE PORTAL INTEGRATION

Create a custom, branded product with the WebXpress capability to be integrated seamlessly with an existing Corporate Website and Security Server.

"ZERO RESOURCE" IMPLEMENTATION

There is no requirement for internal I.T. resources. Setting up user applications requires "zero resources." ABT point and click implementation means rapid deployment with custom, application tailored, intuitive interface screens make user training unnecessary. This translates to significantly lower implementation costs.

UNLIMITED DOCUMENT IMPORTING

Documents can be captured, indexed, stored, and accessed by any user worldwide – regardless of the system on which they were created. The use of industry standard communications

coupled with automatic conversion of documents for Internet access delivers true e-Commerce document exchange.

MULTI-LEVEL SECURITY SOFTWARE

Proprietary "Right2View" means that all documents are encrypted and accessible only through 3 layers of user access codes.

COMPLIANCE

WebXpress meets all of the compliance requirements of HIPPA, Sarbanes-Oxley, SEC 17a, and the FDIC.

VIRTUAL ELECTRONIC FILE FOLDERS

WebXpress, for example, allows any medical document, personnel record, proof of delivery image, or computer invoice to be captured - regardless of its' source, to be linked *to any other relevant document in the warehouse* and accessed globally by any Web Browser as a virtual electronic file folder.

Remote hosting means that billing is on a "click-charge" basis. You pay for what you need. No upfront system costs, no implementation costs, no on-going upgrade and maintenance costs, and no internal resource utilization or workstation installation impact.

People that have been in the document management industry for more than 20 years designed ABT Global's WebXpress. It is the result of extensive trial and error with other document software – you gain a solution designed by developers that have already made their mistakes.

ABT developers "know what you don't know" about how software should function. Their marquee list of Fortune 500 clients attest to both their technology and business process "know how".
